Dear Hiring Team,

I am pleased to apply for the **Entry Level Programmer Analyst** position with **Marlabs Inc.** I bring more than three years of professional software engineering experience and an MS in Computer Science from Pace University, completed with a 4.0 GPA. My strongest match is hands-on experience developing and supporting custom applications: at Sperse, I build a multi-agent CRM platform with Python, FastAPI, LangGraph, and LangChain that securely routes requests across 40+ specialized agents for more than 10,000 users.

My recent work combines coding fixes and new software development with direct responsibility for production and test systems. I deliver features across a React, TypeScript, and Temporal workflow application, and I built GitHub Actions CI/CD release gates with OpenTelemetry evaluations that catch latency, accuracy, and safety issues before deployments. I also applied Object Oriented Programming concepts to a FastMCP service exposing 160+ validated backend actions for reliable CRM automation. These experiences would let me contribute immediately to Marlabs' application development, maintenance, and production support while continuing to learn new and updated technologies through its mentorship culture.

Previously at Qualitest, I developed a custom storage application in Java and Spring Boot using object-oriented interfaces across Google Cloud Storage, S3, and MinIO. I also applied strong Database concepts to PostgreSQL window functions, materialized views, and indexes, reducing query latency and presenting Data Analytics through React visualizations. Managing AWS Step Functions and Lambda workloads across 100K+ weekly executions strengthened the methodical debugging, operational judgment, and excellent communication skills needed to support dependable customer systems and coordinated deployments.

Marlabs' mission to build future-ready foundations that create sustainable business value and lasting human impact resonates with how I approach engineering: execute collaboratively, adapt quickly, and measure outcomes. I would welcome the opportunity to grow through Marlabs' learning and mentorship environment while helping its cross-functional teams deliver maintainable, user-centered applications. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
