EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, Python, Rust, JavaScript/TypeScript, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, LangGraph, LangChain, FastMCP, React, LangSmith, Langfuse

AWS Services: EC2, CloudWatch, Step Functions, S3, Lambda, RDS, CloudFormation, CloudFront, API Gateway

Databases: PostgreSQL, Redis, MongoDB

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **distributed, multi-tiered** CRM platform in **Python (LangGraph, FastAPI)** routing requests **asynchronously** across 40+ specialized sub-agents for 10,000+ users — with **object-oriented** service decomposition, tenant-aware access control, and end-to-end **OpenTelemetry** monitoring
- Designed **asynchronous**, fault-tolerant workflow execution with **React Flow, TypeScript**, and **Temporal** — enabling **large-scale** durable pipelines with **multi-threaded** task dispatch and live **monitoring** via **Redis** with real-time **reporting**
- Built a **FastMCP** MCP server exposing 160+ backend actions to **distributed** AI agent fleets with **multi-threaded** dispatch, **Pydantic** schema validation, and **OpenTelemetry** tracing and **alarming** across multi-tenant deployments
- Built **GitHub Actions CI/CD** pipelines with **OpenTelemetry** trace-driven evals scoring latency, accuracy, and safety — enforcing **operational excellence** through **alarming** thresholds and automated quality gates before every production push

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a **large-scale** cloud-agnostic Storage Service in **Java** and **Spring Boot** — applying **object-oriented design** with a pluggable adapter pattern backed by **PostgreSQL** and **Redis** — handling **distributed** file operations across **Google Cloud Storage, S3**, and **MinIO** via expiring signed URLs
- Orchestrated **asynchronous distributed** jobs with **AWS Step Functions** and **Lambda** — implementing retry logic and fault recovery — eliminating timeout failures across **100K+** weekly executions with **CloudWatch monitoring** and **alarming**
- Optimized **PostgreSQL** with window functions, materialized views, and targeted indexes to cut query latency at **large-scale**, surfacing metrics through interactive **React** dashboards for business **reporting**

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed** coding-agent orchestrator that decomposes large requests into dependency-aware **DAGs**, executing them **asynchronously** across multi-machine agents with fault-tolerant retries — a **large-scale, multi-threaded distributed system**
- Designed the **multi-tiered** scheduling layer for failure isolation — detecting failed nodes, reassigning tasks, and restoring execution state without manual intervention for **operational excellence** in a fully **asynchronous** agent fleet
