EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Messaging & Systems: distributed systems, networking, async/concurrent programming, real-time performance, REST APIs

Languages: Java, JavaScript/TypeScript, Python, Rust, HTML/CSS

Reliability & Quality: performance tuning, testing, observability, incident investigation, hotfix resolution, A/B testing

Frameworks & Data: React, React Flow, FastAPI, Spring Boot, Temporal, PostgreSQL, Redis, Pgvector

Cloud & Delivery: AWS (S3, Lambda, Step Functions, CloudWatch), Git, GitHub Actions, CI/CD, Docker, OpenTelemetry

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Spense

Feb 2026 - Present

- Designed, built, and shipped a **real-time** visual workflow experience in **React Flow** and **TypeScript**, pairing live progress notifications with **Temporal** and **Redis** so 10,000+ users could create, run, and monitor durable agent workflows end to end
- Improved **reliability, latency, and performance** across a distributed CRM platform by routing requests among 40+ specialized agents with **FastAPI**, secure access control, retries, and resumable execution
- Instrumented production workflows with **OpenTelemetry** trace-based evals and **GitHub Actions CI/CD**, testing latency, accuracy, and safety before release and giving engineers observability for incident investigation and hotfix resolution
- Collaborated across frontend and backend boundaries to ship a **FastMCP** service exposing 160+ validated actions, enabling reliable asynchronous communication and monitored workflow delivery across multiple customers
- Automated code-quality review with **OpenAI Codex** and a Bitbucket integration, triaging 25–30 PRs per week and reducing manual reviewer load by several hours while accelerating safe feature delivery

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Built a high-quality Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, using expiring signed URLs to deliver uploads and downloads reliably across **Google Cloud Storage**, **S3**, and **MinIO**
- Tuned database and application performance with window functions, materialized views, and indexes, reducing query latency and surfacing results through consumer-facing **React** visualizations for product stakeholders
- Orchestrated async/concurrent jobs with **AWS Step Functions** and **Lambda**, improving error recovery and operational reliability across **100K+ weekly executions** through retries and observable failure states
- Partnered with business stakeholders to define data needs and deliver interactive **React** experiences, translating operational metrics into product decisions and iterative performance improvements

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript, Distributed Systems* | github.com/ozzyozbourne/dark-factory

- Built a **distributed systems** orchestrator that converts large requests into dependency-aware task DAGs and executes them across multiple machines with concurrent workers, retries, and timeout handling
- Added real-time execution state and failure recovery to make long-running workflows observable, reliable, and responsive under asynchronous workloads
- Implemented dependency-aware scheduling, timeout handling, and retry policies to preserve execution correctness when workers or networked tasks fail
