Dear Hiring Team,

I am applying for the **Applications Engineer** role at **Particle Measuring Systems**. I bring more than three years of experience building production software systems that translate complex requirements into reliable workflows, plus a Master of Science in Computer Science from Pace University. More importantly for this role, I have spent my career turning technical detail into systems, documentation, and support that non-specialists can act on.

At Sperse, I built a multi-agent CRM platform with **Python**, **LangGraph**, **LangChain**, and **FastAPI**; a **React Flow** and **TypeScript** workflow console with **Temporal**-based durable execution; **GitHub Actions CI/CD** with OpenTelemetry trace-based evals; a **FastMCP** server exposing 160+ backend actions; and **LlamaIndex**-powered RAG agents that generate ready-to-run **REST** API examples for **technical documentation** and knowledge sharing. That combination maps closely to your pre-sales and post-sales work, especially **product demonstrations**, **technical presentations**, feasibility checks, troubleshooting, and the clear communication needed to support customer success.

At Qualitest, I designed a cloud-agnostic Storage Service with **Java**, **Spring Boot**, **PostgreSQL**, and **Redis**, optimized database performance, and orchestrated long-running jobs with **AWS Step Functions** across 100K+ weekly executions. That work strengthened my ability to investigate technical issues methodically, drive **process improvements**, and communicate tradeoffs to business stakeholders. Particle Measuring Systems' mission to lead in contamination monitoring by improving the performance of clean manufacturers through superior technology, quality, and service, and your values of **Be true**, **Own it**, and **Aim high**, align with how I like to work: rigorously, collaboratively, and with accountability. I would welcome the opportunity to contribute to **this team and its mission**.

I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, and I look forward to connecting.

Sincerely,
Osaid Khan
