EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages & APIs: Python, Java, TypeScript, SQL, Bash, REST APIs, HTTP, FastAPI

Distributed Systems: Microservices, low-latency systems, high-throughput services, high reliability, concurrency, message passing

Data & Messaging: Redis, PostgreSQL, MongoDB, Pgvector, durable job orchestration

Cloud & Infrastructure: AWS, Kubernetes, Docker, GitHub Actions, CI/CD, OpenTelemetry

AI & Frontend: LangGraph, LangChain, LlamaIndex, OpenAI, React, React Flow

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Built a **scalable distributed system** in Python, FastAPI, LangGraph, PostgreSQL, and Redis that routes high-concurrency requests across 40+ specialized services for 10,000+ users with secure tenant-aware access control
- Designed clean **REST APIs** and a production MCP service exposing 160+ validated backend actions, using structured schemas, monitoring, and error isolation to deliver high-reliability customer workflows
- Developed low-latency, durable microservice workflows with Temporal and **Redis**, adding resumable execution, retries, and live progress tracking for long-running distributed jobs
- Deployed containerized services through **Kubernetes**, Docker, and GitHub Actions CI/CD, using OpenTelemetry trace-based evaluations to catch latency, accuracy, and safety regressions before production
- Built LlamaIndex RAG services with OpenAI embeddings and **PostgreSQL/Pgvector**, generating ready-to-run REST API examples and reliable responses over product documentation

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed and launched a cloud-agnostic storage microservice in Java and Spring Boot with **PostgreSQL** and Redis, supporting secure file operations across AWS S3, Google Cloud Storage, and MinIO via expiring signed URLs
- Improved high-throughput data access by optimizing PostgreSQL window functions, materialized views, and indexes, reducing query latency and strengthening scalability
- Orchestrated resilient workloads with AWS Step Functions and Lambda, improving timeout handling and error recovery across **100K+ weekly executions**

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript, Docker*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that executes dependency-aware task DAGs across multiple machines with concurrency controls, retries, timeout handling, and failure recovery
