EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, Rust, Html/Css
Backend & Frameworks: FastAPI, React, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: PostgreSQL, MongoDB, Redis
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Architected an AI-first multi-agent CRM platform in Python, LangGraph, LangChain, and FastAPI, serving 10,000+ users by routing requests across 40+ specialized sub-agents with tenant-aware access control and JWT propagation - Built end-to-end fullstack features for a React Flow and TypeScript visual workflow platform enabling users to compose, run, and manage agentic swarms across client-side and server-side layers, backed by Temporal for durable execution - Engineered a production-grade MCP server with FastMCP exposing 160+ LLM-callable backend actions, built with Pydantic validation, OpenTelemetry instrumentation, and multi-tenant isolation for enterprise AI automation - Built LlamaIndex-powered RAG agents using OpenAI embeddings and PostgreSQL pgvector, translating technical documentation into on-demand answers and ready-to-run REST API code samples for end users - Delivered CI/CD pipelines with GitHub Actions gating every AI agent release using OpenTelemetry trace-based evals that surface latency, accuracy, and safety regressions before production	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot backed by PostgreSQL and Redis, handling file uploads, downloads, and deletions across AWS S3, Google Cloud Storage, and MinIO via expiring signed URLs - Optimized PostgreSQL with window functions, materialized views, and indexes to reduce query latency and improve scalability; exposed results through interactive React visualizations for business stakeholders - Orchestrated long-running jobs with AWS Step Functions, eliminating Lambda timeouts and hardening error recovery across 100K+ weekly production executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator in Elixir and TypeScript that decomposes requests into dependency-aware task DAGs, executing across multi-machine AI agents with retries, timeouts, and fault-tolerant scheduling - Designed API-driven interfaces for agent registration and dynamic sub-task delegation, enabling plug-and-play extensibility across heterogeneous AI agent implementations and execution environments
