EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Databases: Redis, PostgreSQL, MongoDB
AWS Services: Lambda, Step Functions, EC2, RDS, S3, CloudWatch, CloudFormation, CloudFront, API Gateway
Languages: Java, Go, Python, JavaScript/TypeScript
Backend & Frameworks: Spring Boot, FastAPI, React
Others: Docker, Kubernetes, CI/CD, Git
AI/Agents: LangGraph, LangChain, FastMCP, LangSmith, Langfuse, LlamaIndex, Claude Code, Codex

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Engineered a high-throughput distributed systems service (FastMCP 2.0, Python) exposing 160+ tools over a NoSQL-backed multi-tenant backend, using asynchronous messaging and event-based routing with OpenTelemetry for real-time failure detection - Architected a horizontally scalable multi-agent CRM system using LangGraph and FastAPI, with lazy-loaded sub-agent skills and JWT/tenant/role context propagation for fault-tolerant execution across 40+ specialized agents - Implemented Redis-backed in-memory NoSQL and SQLite-checkpointed multi-turn state with high availability persistence, two-stage jailbreak safety checks, and low-latency resumption under concurrent load - Built trace-driven eval suites replaying production conversations with real-time monitors and auto-remediation triggers to detect unsafe agent behavior and enforce reliable tool-schema contracts before release	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Built a distributed agent-evaluation pipeline ensembling LLM judges and reward models to rank multi-step tool-use runs with asynchronous parallel scoring for scalable trace analysis - Implemented a LangGraph eval pipeline that scored agent runs, selected high-performing traces, and tuned prompts — increasing tool-call success by 50% through systematic fault detection and iterative feedback loops	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Orchestrated long-running distributed jobs with AWS Step Functions and AWS Lambda, implementing event-based workflows with fault-tolerant error recovery and auto-remediation across 100K+ weekly executions - Applied low-level optimizations to PostgreSQL (window functions, materialized views, composite indexes), achieving sub-millisecond read latency and high-throughput data access at scale - Designed interactive dashboards with React.js to surface real-time operational data, improving reliability of business reporting and enabling faster stakeholder decision-making	

PROJECTS

Dark Factory <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator decomposing requests into dependency-aware task DAGs, executing across multi-machine agents with horizontal scaling, snapshotting, fault-tolerant retries, and disaster recovery-ready timeout handling - Implemented asynchronous messaging and event-based task scheduling for high-availability dispatch, with auto-remediation logic ensuring reliable completion under concurrent agent load
