EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Go, Java, JavaScript/TypeScript, Python, Rust, HTML/CSS
Backend & Frameworks: REST APIs, FastAPI, Spring Boot, React, LangGraph, FastMCP
Databases: PostgreSQL, MongoDB, Redis
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, API Gateway
Others: Git, GitHub Actions, CI/CD, Automated Testing, Docker, Kubernetes, OpenTelemetry

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built a user-facing React Flow and TypeScript workflow platform for customers to create, run, and monitor agentic swarms, using Temporal for reliable, resumable execution - Automated daily code review triage by integrating OpenAI Codex with a custom Bitbucket MCP server, processing 25-30 PRs/week and saving reviewers several hours of manual work - Built a secure Python and FastAPI CRM platform serving 10,000+ users by routing requests across 40+ specialized sub-agents with access controls - Built GitHub Actions CI/CD pipelines with OpenTelemetry trace-based evaluations, flagging latency, accuracy, and safety issues before production releases - Created a monitored API layer with FastMCP that gave AI agents secure access to 160+ backend actions across multiple customer environments	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Built a cloud-agnostic Storage Service in Java and Spring Boot that handled file operations across S3, Google Cloud Storage, and MinIO through secure, expiring URLs - Reduced query latency and improved scalability by optimizing PostgreSQL with window functions, materialized views, and indexes - Built interactive React visualizations that gave business stakeholders a clear way to explore the optimized data - Orchestrated long-running jobs with AWS Step Functions, preventing Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Granular Guard <i>Go, JavaScript</i>	github.com/ozzyozbourne/granular-guard
- Built a Go API that parses Git diffs into independent review sections, detects credentials only in added lines, and isolates risky sections while safe work continues - Built a JavaScript review interface with masked remediation guidance, server-validated approvals, audit history, automated tests, and GitHub Actions CI - Added structured request logs, health checks, security headers, and Docker packaging to support production-ready operation
