EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, Rust, Python, JavaScript/TypeScript, Html/Css

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Backend & Frameworks: Spring Boot, FastAPI, LangGraph, LangChain, FastMCP, LangSmith, Langfuse, React

Others: CI/CD, Git, Docker, Kubernetes, OpenAI Agents SDK, Google ADK, LlamaIndex, Claude Code

Databases: PostgreSQL, MongoDB, Redis

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Owned the **full software development lifecycle** — defining, designing, building, and testing a **GenAI**-powered **multi-agent** CRM platform in **Python**, **LangGraph**, and **FastAPI** routing requests across 40+ specialized sub-agents with **secure** tenant-aware access control and prompt-injection defenses across 10,000+ users
- Leveraged **GenAI (OpenAI Codex)** with a custom **Bitbucket** MCP server to automate code review triage, eliminating 25–30 manual PR reviews per week and accelerating engineering transitions across distributed teams
- Engineered a production **FastMCP** server exposing 160+ LLM-callable backend actions with **Pydantic** validation and **OpenTelemetry** instrumentation, enabling **distributed** agentic **cloud workloads** with built-in security monitoring across multiple customers
- Built **GitHub Actions CI/CD** pipelines with OpenTelemetry trace-based evals scoring latency, tool-call accuracy, and safety — gating every AI agent deployment and enforcing quality standards across the full release pipeline
- Built **LangGraph**-orchestrated **multi-tiered** agentic workflows in **TypeScript** and **React Flow** with **Redis**-backed progress tracking for durable, resumable execution across long-running **distributed** tasks

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed and built a cloud-agnostic, **multi-threaded** Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, handling secure file operations across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs for **data-in-transit protection**
- Orchestrated **large-scale distributed** jobs using **AWS Step Functions**, eliminating **Lambda** timeouts and improving fault-tolerant error recovery across **100K+** weekly executions through multi-stage workflow management
- Optimized **PostgreSQL** with window functions, materialized views, and indexes to reduce query latency and improve scalability, then exposed results through interactive **React** visualizations for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built an **open-source distributed** coding-agent orchestrator that decomposes large coding requests into dependency-aware task **DAGs**, executing them across multi-machine AI agents with fault-tolerant retry and timeout handling
- Designed the concurrent execution runtime in **Elixir** using OTP supervision trees for fault tolerance, enabling parallel DAG traversal and real-time agent status propagation across a **distributed** multi-machine fleet
