EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Rust, Java, JavaScript/TypeScript, Html/Css

Backend & Frameworks: FastAPI, Spring Boot, FastMCP, React, LangGraph, LangChain, LangSmith, Langfuse

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

Databases: PostgreSQL, Redis, MongoDB

AWS Services: EC2, Lambda, Step Functions, CloudWatch, S3, RDS, CloudFormation, CloudFront, API Gateway

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built **Python** and **FastAPI** automation services in a **Linux development environment**, applying **real time software design** patterns (deterministic APIs, bounded retries, tenant-safe tool calls) to releases for 10,000+ users with **minimal defects**.
- Designed **Python** for **test framework** automation and **automated integration tests** for 160+ **FastMCP** backend actions using Pydantic validation, OpenTelemetry trace evals, and GitHub Actions **CI/CD** to flag release regressions.
- Engineered **multi-tasking** and **event driven** workflow execution with **React Flow**, **TypeScript**, and **Temporal**, enabling users to create, run, and monitor durable agentic swarms with Redis-backed live progress tracking.
- Built an agentic code review pipeline integrating **OpenAI Codex** with a custom Bitbucket MCP server, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours.
- Collaborated with engineers and architects across sites/cultures on global projects through an **Agile/Scrum way of working**, sprint goals, **SAFe process** planning, and retrospectives, aligning API handoffs with Hardware and Optical/Systems team-style **plug firmware integration** needs while applying **Software Development best practices** for continuous improvement.

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** in a **Linux build** workflow, handling uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs and integration-testable **C/C++** and **C++ programming** handoff contracts for an **embedded/RTOS Linux environment**.
- Improved **high performance** data paths by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed results through **React** dashboards for business stakeholders while minimizing resource usage.
- Orchestrated **event driven** long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions in Agile/Scrum delivery cycles.

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that decomposes large requests into dependency-aware DAGs and executes them across multi-machine agents with retries, timeout handling, and event driven scheduling.
- Designed pluggable worker contracts and validation flows that adapt across executor families, mirroring **automated integration tests** for **optical transport terminal products**, **optical transport coherent pluggable devices**, **software/firmware features**, **plug families**, and **RTOS solutions** in an **RTOS environment**.
