EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css
AI & Agent Frameworks: LangGraph, LangChain, FastAPI, FastMCP, LangSmith, Langfuse, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code
Cloud & DevOps: AWS Services, CI/CD, Docker, Kubernetes, Git, CloudFormation, CloudFront, API Gateway, Lambda, EC2, RDS, S3, Step Functions, CloudWatch
Databases: PostgreSQL, Redis, MongoDB
Web: React

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built a multi-agent CRM platform with Python, LangGraph, LangChain, and FastAPI, routing 10,000+ users across 40+ specialized sub-agents with tenant-aware access control, secure tool execution, and internal data pipelines between services - Built CI/CD pipelines for AI-agent deployments in Docker and Kubernetes, adding automated testing and release gates for production pipelines that caught latency, accuracy, and safety regressions before production - Created a FastMCP server that exposed 160+ backend actions to AI agents, enabling secure CRM automation across multiple customers with built-in monitoring and permissioned access to client data sources via APIs - Built an agentic code-review pipeline with OpenAI Agents SDK and Claude Code for LLM-based systems, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours - Built LlamaIndex-powered RAG agents to answer product questions and generate ready-to-run REST API examples from internal docs, pairing retrieval with structured response generation for business users	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis that handled file uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs - Reduced query latency and improved scalability for large-scale datasets by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposed the data through interactive React visualizations for business stakeholders - Orchestrated long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
