EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Rust
Backend & Frameworks: FastAPI, Spring Boot, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
AI/Agents: Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code, Codex
Databases: PostgreSQL, MongoDB, Redis
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Others: Git, CI/CD, Docker, Kubernetes

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Designed a multi-agent CRM orchestration system (LangChain, LangSmith, FastAPI) routing requests to 40+ specialized sub-agents, with lazy-loaded tool context, prompt-injection defenses (input sanitization, system-prompt hardening, tool-call guardrails), and tenant-aware access control via JWT propagation through every agent. - Built LlamaIndex-powered RAG agents for CRM workflow support, ingesting and chunking technical documentation and indexing OpenAI embeddings in pgvector to answer product questions and generate ready-to-run API examples. - Engineered a production MCP server (FastMCP) exposing 160+ LLM-callable tools over a multi-tenant .NET backend TDD-built with Claude Code, Pydantic validation and OpenTelemetry instrumentation. - Built OpenTelemetry trace-driven eval suites that replay production conversations across prompts and model versions, scoring latency and tool-call accuracy and flagging unsafe behavior. - Built durable, user-defined agentic workflows with React Flow and Inngest, plus a fleet-management layer with Slack and Teams integration giving users a unified view and real-time observability across all running agent swarms. - Integrated Whisper-powered voice input, streaming real-time transcription into the multi-agent system so users can issue CRM commands and queries by speech. - Built GitHub Actions CI/CD pipelines gating deploys on LLM eval suites and end-to-end tests	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Built an agentic optimization virtual lab that tunes CUDA kernels via evolutionary search paired with an ensemble of LLM judges, using LangGraph to orchestrate hypothesis generation, NVIDIA Nsight profiling for performance feedback - Fine-tuned Qwen3-8B (Unsloth, LoRA) to internalize tool schemas into model weights reducing prompt tokens by ~70% at equal task accuracy	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Python with PostgreSQL and Redis that handles file uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs. - Reduced query latency and improved scalability by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposed the data via interactive React.js visualizations for business stakeholders. - Orchestrated long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
