Dear Eagle Eye Networks and Brivo Hiring Team,

I am applying for the **Software Engineer - New Grad** position in Bethesda. I bring more than three years of professional engineering experience, a recently completed Master of Science in Computer Science from Pace University, and unusually direct experience building the AI products, APIs, and MCP servers described in this role. Eagle Eye Networks and Brivo's mission to make physical spaces safer through a unified, cloud-native, AI-driven security platform is especially compelling to me because it combines customer-facing software, reliable infrastructure, and practical AI innovation.

At Sperse, I built an AI-driven CRM platform with Python, FastAPI, LangGraph, and FastMCP that routes requests across more than 40 specialized agents for over 10,000 users. I created a production MCP server exposing 160+ validated backend actions with tenant-aware JWT authorization, structured schemas, monitoring, and defenses against unsafe tool calls. I also developed a TypeScript and React Flow platform that lets customers rapidly prototype, deploy, and monitor durable agentic workflows, using Temporal and Redis for resumable execution and live status. This work maps directly to building next-generation security products, REST APIs, and MCP servers on agile product teams.

I have also shipped AI-native developer tooling and production quality systems at startup speed. By integrating OpenAI Codex with Bitbucket, I automated triage across 25–30 pull requests per week and saved reviewers several hours. I built GitHub Actions CI/CD quality gates with OpenTelemetry trace-based evaluations that catch latency, accuracy, and safety regressions before weekly releases. Earlier at Qualitest, I developed Java and Spring Boot REST APIs backed by PostgreSQL and Redis, delivered secure file operations across AWS S3, Google Cloud Storage, and MinIO, and improved failure recovery across more than 100,000 weekly AWS Step Functions executions.

I would welcome the opportunity to bring this combination of Python, Java, Node.js/TypeScript, AWS, Linux, Docker, automated testing, and AI-native product development to your integrated security platform. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
