EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages & Web: *TypeScript*, *Node.js*, *Python*, JavaScript, HTML, CSS, Java, Rust

Product & Frameworks: *React*, React Flow, FastAPI, Spring Boot, REST APIs, modern UI frameworks, web applications

Backend & Data: *Postgres/PostgreSQL*, MongoDB, Redis, Pgvector, backend systems, data models, distributed systems

AI-Assisted Development: *Codex*, *Claude Code*, LangGraph, LangChain, OpenAI Agents SDK, FastMCP, LlamaIndex, GitHub Actions, CI/CD

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Planned and built customer-facing product features end to end using **TypeScript**, **Node.js**, **React Flow**, Python, and FastAPI, enabling 10,000+ users to create, run, and manage durable agentic workflows
- Improved product simplicity and reliability by adding live Redis progress tracking to long-running Temporal workflows, giving users clear execution status and resilient recovery across the UI and backend systems
- Built internal tools with **Codex** and a custom Bitbucket MCP server to automate PR triage across 25–30 pull requests/week, reducing manual review work by several hours and making engineering feedback easier to act on
- Created a multi-agent CRM platform with LangGraph and LangChain, decomposing user requests across 40+ specialized agents with validated actions, secure access control, and pragmatic failure handling
- Developed GitHub Actions CI/CD and OpenTelemetry evaluation pipelines that measured latency, accuracy, and safety, catching regressions before production and improving performance and reliability

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Built and maintained a cloud-agnostic backend service in Java, Spring Boot, **PostgreSQL**, and Redis, providing reliable file APIs across Google Cloud Storage, S3, and MinIO through expiring signed URLs
- Improved search and analytics performance by optimizing PostgreSQL data models with window functions, materialized views, and indexes, then delivered interactive **React** user interfaces for business stakeholders
- Automated long-running backend workflows with AWS Step Functions and Lambda, improving error recovery and operational reliability across 100K+ weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a collaborative AI development tool that decomposes tricky problems into dependency-aware task DAGs and coordinates multi-machine agents with retries, timeouts, and observable execution state
- Applied **TypeScript** and AI-assisted development to create a maintainable builder workflow focused on user impact, clean system boundaries, and tools that make others more productive
