Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the Software Engineer position with LanceSoft. I bring over three years of professional experience in full-stack web applications, RAG and AI agents, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across two engineering roles, I have built and delivered production-grade backend systems that directly reflect the focus on test-driven development and agile software design this position demands. As a Software Engineer at Sperse, I developed an MCP AI interaction layer that translates natural-language intents into safe tool calls across 1000+ endpoints. Doing so reliably required a heavy emphasis on test-driven development and software test automation to ensure end-to-end stability. I also built generative code solutions from the product backlog, relying on iterative development and thorough user stories estimation to accelerate integrations, while optimizing prompt routing to reduce LLM costs by 50% and validating all deliverables against acceptance tests. Prior to Sperse, as a Software Engineer at Qualitest, I designed a cloud-agnostic Storage Service using Python, PostgreSQL, and Redis that seamlessly managed files across S3 and MinIO via signed URLs, ensuring operational integrity through comprehensive automated test scripts. I also contributed to an Identity & Access Management platform supporting thousands of users, participating in daily Scrum routines and sizing user stories, and developed backend workflows using AWS Step Functions to manage long-running data imports. Both of these roles have prepared me to develop and test code effectively to implement features from the product backlog.

My academic research experience has given me a rigorous foundation in model development and technical communication — skills that translate directly into the culture of continuous learning and collaborative partnerships this team values. As an AI Researcher at the Pace Artificial Intelligence Lab, I researched StyleGAN and Stable Diffusion using CUDA, PyTorch, and LORA, driving agile development and executing unit test code on an HPC cluster. I managed model inference with vLLM and Hugging Face deployment, assuring secure model serving by adhering strictly to core infrastructure and security standards. Beyond building the systems myself, I led workshops on CUDA, Mojo, and AI Agents for an audience of 50+ students. Designing and delivering those sessions required me to demonstrate agile software design methodology and Scrum practices — directly mirroring the cross-functional collaboration and knowledge-sharing responsibilities central to working with infrastructure, security, and other partners. This experience has shaped me into an engineer who builds with rigor and communicates with clarity, both of which I would bring to LanceSoft and its mission.

I have always been passionate about building human-centric solutions through purposeful innovation and strong partnerships and envision myself contributing my talent to the furthering of establishing global cross-culture human connections that strengthen businesses. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
