Dear Hiring Team,

I am excited to apply for the **Software Engineer I** role at **Fullbay**. Your mission to create safer roads by helping heavy-duty repair shops run more efficiently strongly resonates with me, and I am motivated by the opportunity to build software that improves both operational outcomes and everyday safety.

In my current Software Engineer role at Sperse, I design system architecture across services and APIs, building backend modules that translate natural-language requests into safe, validated tool calls across 1000+ endpoints. I also implemented observability with Langfuse and LangSmith and optimized processor usage and caching, improving performance, scale, and availability while reducing latency by 60% and LLM API cost by 50%. This directly aligns with Fullbay's focus on designing robust backend and frontend changes, delivering scalable and secure software, and resolving issues through disciplined engineering practices.

At Qualitest, I delivered frontend and backend features for an IAM platform using React, Spring Boot (Java), and AWS for 30+ applications. I also designed a cloud-agnostic storage service across Google Cloud Storage, S3, and MinIO, evaluated Dynamo tradeoffs, and built AWS Step Functions workflows with unit and feature tests to improve availability and reduce ticket resolution time by 20%. That experience maps well to your expectations around API-driven design, cloud infrastructure awareness, production-ready code quality, and test coverage before QA handoff.

I am especially drawn to Fullbay's values to **Build Quality Tools**, **Run Into the Fire**, and **Be High Performing**. I value the same combination of craftsmanship, bias for action, and execution discipline, and I would be excited to contribute to Fullbay's goal of giving shops a better life while helping create safer roads for all. I would welcome the opportunity to discuss how my experience can support this team and its mission. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
