EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, Rust, Html/Css

Backend & Frameworks: FastAPI, Spring Boot, React, FastMCP, LangGraph, LangChain, LangSmith, Langfuse

Others: Claude Code, Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex

Databases: PostgreSQL, Redis, MongoDB

AWS Services: API Gateway, Lambda, Step Functions, CloudWatch, S3, EC2, RDS, CloudFormation, CloudFront

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built and maintained **APIs, workflows, integrations, and tooling** for a multi-agent CRM platform using **Python, FastAPI**, LangGraph, and LangChain, routing requests across 40+ specialized sub-agents with secure access control for 10,000+ users
- Developed a **JavaScript/TypeScript** and React Flow visual workflow platform for creating, testing, and operating agentic swarms, using Temporal for durable, resumable execution and **Redis** progress tracking for live operational visibility
- Built an **AI-assisted engineering** code-review integration using **OpenAI Codex** and a custom Bitbucket MCP server, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours
- Created a **FastMCP API integration** exposing 160+ backend actions as safe, validated tool calls, enabling secure CRM workflow automation across multiple customers with built-in monitoring and production debugging
- Implemented GitHub Actions **CI/CD** pipelines and **automated testing** with OpenTelemetry trace-based evals, improving code quality by flagging latency, accuracy, and safety issues before production deployments

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Built and maintained a cloud-agnostic Storage Service **API** in **Java** and **Spring Boot** with PostgreSQL and Redis, integrating Google Cloud Storage, S3, and MinIO for uploads, downloads, deletions, and expiring signed URLs
- Contributed to **integrations** across internal storage workflows and external cloud services, standardizing file operations behind signed URLs while keeping the Java service modular and maintainable across Google Cloud Storage, S3, and MinIO
- Debugged and optimized **PostgreSQL** queries using window functions, materialized views, and indexes, reducing latency and exposing operational data through interactive **React** visualizations for business stakeholders
- Automated long-running production workflows with **AWS Step Functions** and **AWS Lambda**, improving error recovery, reducing timeouts, and supporting 100K+ weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that translates large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
- Developed **TypeScript** workflow tooling for structured task execution, failure escalation, and **production support**, applying AI-assisted development patterns to improve developer workflows
- Implemented retry and timeout handling for distributed agent execution, supporting systematic **testing and debugging** when tasks fail across dependency-aware, multi-machine workflows
