EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY Jan 2024 - Dec 2025
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css
AWS Services: EC2, CloudWatch, S3, Lambda, Step Functions, RDS, CloudFormation, CloudFront, API Gateway
Others: CI/CD, Docker, Kubernetes, Git, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code
Backend & Frameworks: FastAPI, Spring Boot, FastMCP, LangGraph, LangChain, React, LangSmith, Langfuse
Databases: PostgreSQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ Feb 2026 - Present
- Built GitHub Actions CI/CD pipelines for AI-agent deployments with OpenTelemetry trace-based monitoring that tracks system health, flags latency and safety regressions, and gates every release before reaching production - Built a Python-based MCP server using FastMCP exposing 160+ backend actions as secure API integrations, automating enterprise SaaS workflows across multiple tenants with built-in access control and operational monitoring - Engineered a multi-agent orchestration platform using LangGraph, LangChain, and FastAPI that routes requests across 40+ specialized sub-agents with JWT-enforced SSO-compatible authentication and identity and access control for 10,000+ users - Added live execution monitoring for long-running Temporal workflows via Redis, enabling real-time system health visibility and rapid incident response from a centralized workflow dashboard - Automated daily PR triage across 25–30 PRs/week by scripting an agentic pipeline in Python integrating OpenAI Codex with a custom Bitbucket API, eliminating hours of manual operational toil per week	
Software Engineer Qualitest	Noida, India Feb 2021 - Dec 2023
- Designed a cloud-agnostic infrastructure service in Java and Spring Boot backed by PostgreSQL and Redis, handling file operations across AWS S3, Google Cloud Storage, and MinIO via expiring signed URLs across on-premises and cloud environments - Orchestrated long-running jobs with AWS Step Functions and Lambda, implementing automated disaster recovery with retry and fallback logic ensuring business continuity — eliminating timeout failures across 100K+ weekly executions - Optimized PostgreSQL with window functions, materialized views, and targeted indexes to cut query latency and improve scalability, surfacing metrics through interactive React dashboards for cross-functional stakeholders	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed infrastructure orchestrator that decomposes large tasks into dependency-aware DAGs and executes them across multi-machine agents with automated retries, timeout handling, and fault recovery - Designed the scheduling layer to handle cross-machine incident response — isolating failed nodes, reassigning tasks, and maintaining execution state — without manual intervention
