EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Core Application: Ruby on Rails, React, TypeScript, Java, JavaScript, Python

Data: PostgreSQL, ClickHouse, Redis, Kafka, Pgvector, MongoDB

Infrastructure: Terraform, AWS, LGTM (Loki, Grafana, Tempo, Mimir), Tailscale, Cloudflare, Docker, Kubernetes, CI/CD

SDKs & APIs: iOS, Android, Web, Flutter, React Native, FastAPI, REST, OpenAI Agents SDK

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Shaped a core customer-facing experience end to end by building a **React**, **TypeScript**, and React Flow workflow product for creating, running, and managing agentic swarms, with **Temporal** providing durable execution and fast feedback loops for 10,000+ users
- Took ownership of critical technical decisions for a **Python** and FastAPI multi-agent CRM platform, routing requests across 40+ specialized agents with tenant-aware access control while proactively communicating tradeoffs to technical and non-technical stakeholders
- Built a FastMCP server exposing 160+ validated backend actions and added **Redis** progress tracking for long-running Temporal workflows, giving customers real-time visibility and reliable automation across ambiguous, cross-stack use cases
- Tested hypotheses with OpenTelemetry trace-based evaluations in GitHub Actions **CI/CD**, measuring latency, accuracy, and safety before production releases and improving engineering craft across 25–30 automated PR reviews per week
- Developed LlamaIndex-powered RAG agents with OpenAI embeddings and **PostgreSQL** Pgvector, generating ready-to-run **REST** API examples that accelerated product discovery and adoption

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed an end-to-end storage service in **Java** and Spring Boot with **PostgreSQL** and **Redis**, unifying uploads, downloads, and deletions across **AWS S3**, Google Cloud Storage, and MinIO through secure expiring signed URLs
- Improved marketplace-ready data workflows by optimizing PostgreSQL (window functions, materialized views, and indexes) and delivering interactive **React** visualizations that helped business stakeholders test hypotheses with lower query latency
- Orchestrated long-running workloads with **AWS Step Functions** and Lambda, improving error recovery and eliminating timeout failure modes across **100K+ weekly executions**

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that decomposes ambiguous requests into dependency-aware task DAGs and executes them across multi-machine agents with retries, timeout handling, and end-to-end ownership
- Crafted a high-agency **TypeScript** workflow for increasingly autonomous execution, making critical technical decisions around scheduling and failure recovery while preserving fast feedback loops

Agentic Optimization Virtual Lab | *Python, LangGraph, CUDA*

github.com/ozzyozbourne

- Built a **Python** and LangGraph experimentation loop that generates hypotheses, profiles CUDA kernels with NVIDIA Nsight, and uses LLM judges to select improvements through measurable performance feedback
