EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

AWS Services: EC2, CloudWatch, Step Functions, S3, Lambda, RDS, CloudFormation, CloudFront, API Gateway
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code
Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css
Backend & Frameworks: FastAPI, Spring Boot, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: PostgreSQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built GitHub Actions CI/CD pipelines for production deployments, adding OpenTelemetry trace-based validation and release gates that enforce latency, accuracy, and safety thresholds before code reaches production - Engineered a secure, multi-tenant Python platform with FastAPI and LangGraph that routes requests across 40+ sub-agents, using identity-aware, least privilege access control and real-time observability to support 10,000+ users - Created a FastMCP server exposing 160+ backend actions with Pydantic schema validation, audit logging, and OpenTelemetry instrumentation, turning internal services into auditable, programmatically accessible operations - Added live execution monitoring and alerting for long-running Temporal workflows with Redis, improving operational visibility for resumable jobs and enabling faster incident response from the workflow dashboard	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis, handling file uploads, downloads, and deletions across AWS S3, Google Cloud Storage, and MinIO through expiring signed URLs and secure transfer patterns - Orchestrated long-running jobs with AWS Step Functions and Lambda, reducing timeout failures and strengthening recovery across 100K+ weekly executions with built-in retry, fallback, monitoring, and alerting - Optimized PostgreSQL with window functions, materialized views, and targeted indexes to reduce query latency, resource waste, and support cost optimization, then surfaced the results through interactive React dashboards for business stakeholders	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed orchestrator that decomposes large requests into dependency-aware DAGs and executes them across multi-machine agents with retries, timeout handling, and fault recovery - Designed the scheduling layer to isolate failed nodes, reassign work, and preserve execution state without manual intervention, reinforcing reliability, availability, and operational excellence at scale
