EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: FastAPI, Spring Boot, LangGraph, LangChain, FastMCP, React, LangSmith, Langfuse

Databases: PostgreSQL, Redis, MongoDB

AWS Services: API Gateway, CloudWatch, Step Functions, Lambda, RDS, S3, EC2, CloudFormation, CloudFront

Others: CI/CD, Docker, Kubernetes, Git, OpenAI Agents SDK, Google ADK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **multi-agent** CRM platform on **Python** and **FastAPI** that served 10,000+ users by routing requests across 40+ specialized sub-agents, delivering **APIs** and **services** with secure access control and tenant-aware context propagation
- Built a **React Flow** and **TypeScript** visual workflow platform for creating, running, and managing agentic swarms, using **Temporal** for durable and resumable execution
- Built an agentic code review pipeline integrating **OpenAI Codex** with a custom Bitbucket **MCP** server, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours
- Created a **FastMCP** server exposing 160+ backend actions to AI agents, automating CRM workflows securely across multiple customers with built-in monitoring and traceable execution
- Built GitHub Actions **CI/CD** pipelines for AI-agent deployments, running OpenTelemetry trace-based evals to improve release quality and flag latency, accuracy, safety, and **production issues** before release while hardening internal engineering standards, tooling, and processes

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled file uploads, downloads, and deletions across **S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs
- Reduced query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data through interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed systems** coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine agents with retries and timeout handling
- Added dependency-aware scheduling and failure recovery so independent tasks could run in parallel while blocking steps preserved ordering across long-running multi-machine executions
