Dear Hiring Team,

It is with great enthusiasm that I apply for the **Full Stack Software Engineer** role at **Tutor Intelligence**. I bring hands-on experience building full-stack AI systems with **Python** and **React**, plus a strong research foundation from my M.S. in Computer Science at Pace University.

At Sperse, I designed and implemented operator-facing control interfaces that translated natural-language intents into safe, validated tool calls across 1,000+ endpoints, directly aligning with your need to build control interfaces for real-world robotics systems. I also owned projects from early concept and prototyping through production deployment while improving reliability, scalability, and observability in production environments with Langfuse and LangSmith. That work required debugging complex systems-level issues across hardware and software constraints, and it reduced latency by 60% and API cost by 50% in fast-moving, resource-constrained environments.

My prior engineering work at Qualitest further prepared me for cross-functional execution. I built Python-based backend services with PostgreSQL and Redis, developed a production RAG assistant that cut ticket resolution time by 20%, and contributed to a React/Spring Boot/AWS IAM platform supporting 30+ applications in collaboration with Engineering, Operations, Product, and Leadership. In parallel, my AI research work covered computer graphics and realtime rendering adjacent systems (StyleGAN, Stable Diffusion, CUDA, PyTorch), secure inference with vLLM and Hugging Face, and communication leadership through workshops for 50+ students.

Tutor's mission to build intelligence that lets machines see, learn, and act alongside people in complex real-world production environments strongly resonates with me. I am especially energized by your focus on real-world impact and industry deployment, and I would be excited to contribute to that mission by shipping dependable full-stack systems for robot fleet orchestration in factories and warehouses. I would love to discuss this opportunity and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your consideration.

Sincerely,
Osaid Khan
