Dear Hiring Team,

I am writing to apply for the **Software Engineer** role at **DHI Group, Inc.** I bring more than three years of experience building production backend systems, AI-native workflow automation, and user-facing applications with **TypeScript**, **React**, **AWS**, and cloud-native services, along with a Master of Science in Computer Science from Pace University.

At Sperse, I built a **multi-agent** CRM platform in **Python**, **LangGraph**, **LangChain**, and **FastAPI** for 10,000+ users, routing work across 40+ specialized sub-agents with tenant-aware access control and prompt-injection defenses. I also shipped a **React** and **TypeScript** workflow builder for creating, running, and managing agent swarms with durable, resumable execution, and built an **AI-native** code-review pipeline by integrating **Claude Code** with a custom **FastMCP** review server to automate daily PR triage across 25-30 PRs/week. That mix of product engineering, workflow design, and automation lines up closely with the end-to-end candidate and recruiter experience you are rebuilding at Dice.

My earlier work at Qualitest strengthened the operational side of that foundation. I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs. I also reduced query latency by optimizing **PostgreSQL** with window functions, materialized views, and indexes, exposed the results through interactive **React** visualizations, and orchestrated long-running jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts and improve error recovery across **100K+** weekly executions. Those are the kinds of production systems, cloud-native workflows, and quality-focused practices I would bring to your team.

DHI Group's mission of **Connecting Futures Now** and its **One Team** culture, with a strong emphasis on collaboration, growth, and giving back, is the kind of environment where I do my best work. I value shipping incrementally, reviewing code carefully, and using AI as a core part of how I build, not as a side experiment. I would welcome the chance to contribute to this team's mission and help improve the candidate and recruiter experience.

I would appreciate the opportunity to discuss my fit for **this team and its mission**. I can be reached at +1 (945) 304-5781 or [khanosaid726@gmail.com](mailto:khanosaid726@gmail.com). Thank you for your time and consideration.

Sincerely,  
Osaid Khan
