Dear Hiring Team,

I am writing to express my interest in the **Cloud Engineer** role with **Client**. I bring over three years of experience building and operating production systems across cloud architecture, CI/CD pipelines, observability workflows, and security-focused multi-tenant backend platforms, along with a Master of Science in Computer Science from Pace University.

My recent work maps closely to the role's focus on secure, scalable, and reliable cloud infrastructure. At Sperse, I built **GitHub Actions CI/CD** pipelines with **OpenTelemetry** trace-based validation that gates releases on latency, accuracy, and safety thresholds before production. I also engineered a secure, multi-tenant **Python** platform with **FastAPI** and **LangGraph** for 40+ sub-agents, using **least privilege** access control, added a **FastMCP** server with **Pydantic** validation, **audit logging**, and **OpenTelemetry** instrumentation, and improved operational visibility for long-running **Temporal** workflows with **Redis**, including **monitoring** and **alerting**. Earlier at Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** backed by **PostgreSQL** and **Redis** that handled file operations across **AWS S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs, and I orchestrated 100K+ weekly executions with **AWS Step Functions** and **Lambda** using retry, fallback, **monitoring**, and **alerting** handling.

That background has shaped the way I work: I build with security, automation, and operational discipline from the start. I am comfortable using observability to detect issues early, using CI/CD to deploy safely, and using cloud primitives to keep systems reliable under load. I would welcome the opportunity to contribute that mindset to **Client** as it builds secure, compliant, and cost-conscious cloud platforms with strong engineering standards, **availability** goals, and practical collaboration across technical and business stakeholders.

Sincerely, Osaid Khan

Sincerely,
Osaid Khan
