Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Systems Engineer** role with **Prime Communications Inc.** I bring over three years of engineering experience building production systems, plus a strong academic foundation through my Master of Science in Computer Science from Pace University.

At Sperse, I developed production **system architecture** that translated customer requirements into validated execution flows across **1000+ platform endpoints**, and I served as a **Tier 2 escalation** point for integration and design-related failures. That work required strict **technical review** of documentation and configuration, close coordination with cross-functional delivery stakeholders, and disciplined troubleshooting to keep deployments aligned with design intent. I also optimized concurrency and routing to reduce latency by **60%** and LLM API costs by **50%**. Earlier at Qualitest, I delivered secure backend systems that map directly to physical security operations: a RAG support assistant that cut ticket resolution time by **20%** for **access control** workflows, and a cloud-agnostic storage and IAM stack across **30+ applications** supporting **video surveillance, intrusion detection**, and distributed integrations.

I am especially motivated by Prime Secured's mission, "**We build passionate teams that deliver peace of mind.**" The way your team emphasizes **Serve** and **Growth Minded** strongly aligns with how I approach engineering ownership, collaboration, and continuous improvement. I am excited about the opportunity to contribute to your goal of delivering peace of mind through trusted physical security and technology solutions, and I would welcome the chance to discuss how my background can support this team and its mission.

Thank you for your time and consideration. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com and would value the opportunity to speak further.

Sincerely,
Osaid Khan
