EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Backend & Frameworks: FastAPI, React, Spring Boot, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css

AWS Services: CloudWatch, CI/CD, Lambda, Step Functions, API Gateway, CloudFormation, CloudFront, RDS, S3, EC2

Databases: PostgreSQL, Redis, MongoDB

Others: Git, Docker, Kubernetes, Claude Code, OpenAI Agents SDK, Google ADK, LlamaIndex

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- **Architect in ambiguity**, turning loosely defined stakeholder workflows into **technical requirements** and **technical design documentation** for a **customer-centric** CRM platform in **Python, LangGraph, LangChain**, and **FastAPI**; routed 40+ specialized sub-agents for 10,000+ users with tenant-aware access control
- Built a **React Flow** and **TypeScript** workflow builder with product stakeholders to drive **rapid prototyping** and **full-stack delivery** for agentic swarms, validate **product requirements**, and ship durable, resumable execution paths with **Temporal**
- Shipped an **AI-assisted development** code review pipeline with **OpenAI Codex** and a custom Bitbucket MCP server, creating **feedback loops for coding agents** with deterministic review checks, **system testing**, **unit tests**, and security guardrails across 25-30 PRs/week
- Created a **FastMCP** server exposing 160+ backend actions with a **security-first mindset** and built-in monitoring, giving AI agents safe access to CRM workflows across multiple customers
- Added live progress tracking for long-running **Temporal** workflows using **Redis** and GitHub Actions **CI/CD** pipelines that ran OpenTelemetry trace-based evals to improve **production standards**, **operational readiness**, **observability**, **alerting**, **runbooks**, and **recovery paths** before production

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, handling uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** through expiring signed URLs and secure access patterns
- Reduced query latency and improved scalability by tuning **PostgreSQL** with window functions, materialized views, and indexes, then exposed the data in interactive **React** dashboards for business stakeholders to refine **product requirements** and **high level software design** decisions
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions through clearer operational handoffs and measurable failure paths

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs, executes them across multi-machine AI agents, and keeps runs deterministic with retries and timeout handling
- Added recovery-aware execution and handoff logic so failed subtasks can be retried without restarting the full DAG, keeping autonomous runs debuggable and resumable
