Dear Hiring Team,

I am writing to apply for the **Software Engineer** role with **Bamboo Health**. I bring over three years of experience building backend systems, workflow automation, and AI-assisted tooling, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Across Sperse and Qualitest, I have built production software that maps closely to the technical depth this position demands. At Sperse, I designed a **customer-facing multi-agent** CRM platform in **Python**, **FastAPI**, **LangGraph**, and **LangChain** that served 10,000+ users by routing requests across 40+ specialized sub-agents with secure access control and tenant-aware JWT propagation. I also shipped a **React Flow** and **TypeScript** workflow builder with **Temporal** durable execution, and built an **OpenAI Codex**-powered code review pipeline with a custom Bitbucket MCP server that automated 25-30 PRs/week. To keep those releases reliable, I paired OpenTelemetry trace-driven evals with GitHub Actions **CI/CD** gates and unit and functional test checks, which maps directly to Bamboo Health's emphasis on performant, secure, scalable delivery and strong engineering discipline.

At Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** backed by **PostgreSQL**, **Redis**, and **SQL** that handled uploads, downloads, and deletions across **AWS S3**, Google Cloud Storage, and MinIO through expiring signed URLs. I also optimized relational queries with window functions, materialized views, and indexes, then exposed the data through interactive **React** visualizations for business stakeholders. Finally, I orchestrated long-running jobs with **AWS Step Functions** to eliminate **AWS Lambda** timeouts and improve error recovery across **100K+** weekly executions. That experience gave me the systems-level thinking, database fluency, and operational focus needed to contribute meaningfully to Bamboo Health's customer-facing applications and services.

Bamboo Health's mission to empower clients to deliver seamless, high-quality, and cost-effective care during pivotal moments to improve health outcomes resonates with me, as does the company's focus on improving care and outcomes and improving provider and patient experience. I would welcome the opportunity to bring that mindset, along with my experience in **Java**, **Spring Boot**, **AWS Lambda**, **SQL**, and AI-assisted development tools, to a team building Real-Time Care Intelligence™ for the moments that matter most.

I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
