EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, JavaScript/TypeScript, Python, Rust, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Databases: PostgreSQL, Redis, MongoDB

AWS Services: Lambda, RDS, S3, EC2, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Others: CI/CD, Git, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Built a **customer-facing multi-agent** CRM platform in **Python, FastAPI, LangGraph**, and **LangChain** that served 10,000+ users by routing requests across 40+ specialized sub-agents with secure access control, lazy-loaded tool context, and tenant-aware JWT propagation
- Shipped a **React Flow** and **TypeScript** workflow builder for agentic swarms, using **Temporal** durable execution and resumable runs so users could create, run, and manage long-lived automation without losing state
- Built an **OpenAI Codex**-powered code review pipeline with a custom Bitbucket MCP server, automating 25-30 PRs/week and reducing manual reviewer load by several hours through repeatable triage and safety checks
- Added OpenTelemetry trace-driven evals and GitHub Actions **CI/CD** gates, pairing them with unit and functional test checks to replay production conversations across prompts and model versions and catch latency, accuracy, and safety regressions before release
- Created a **FastMCP** server that exposed 160+ backend actions to AI agents, enabling secure workflow automation across multiple customers with built-in monitoring and control

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** backed by **PostgreSQL** and **Redis** that handled uploads, downloads, and deletions across **AWS S3**, Google Cloud Storage, and MinIO through expiring signed URLs
- Optimized **PostgreSQL** and **SQL** with window functions, materialized views, and indexes to reduce query latency, then exposed the data through interactive **React** visualizations for business stakeholders
- Orchestrated long-running jobs with **AWS Step Functions** to eliminate **AWS Lambda** timeouts and improve error recovery across **100K+** weekly executions

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
- Designed the orchestration layer for parallel handoffs, explicit dependency tracking, and resilient execution so long-running agent workflows stayed predictable under load
