Dear Hiring Team,

I am writing to apply for the **Software Development Engineer II** role with **NextEra Analytics**. I bring over three years of professional experience building backend systems and production AI agents, along with a Master of Science in Computer Science from Pace University.

Across Sperse and Qualitest, I have repeatedly taken ambiguous requirements and turned them into **customer-centric solutions**. At Sperse, I architected in ambiguity, translating loosely defined stakeholder workflows into **technical requirements** and **technical design documentation** for a **multi-agent CRM platform** in **Python**, **LangGraph**, **LangChain**, and **FastAPI**. I also built a **React Flow** and **TypeScript** workflow builder to **rapidly prototype full-stack** agentic swarms with product stakeholders, and shipped an **AI-assisted development** code review pipeline with **OpenAI Codex** and a custom Bitbucket MCP server that created **feedback loops for coding agents**, **system testing**, **unit tests**, and security guardrails across 25–30 PRs per week. That combination of rapid prototyping, secure design, and **CI/CD** discipline matches the technical depth this role demands.

At Qualitest, I worked on production services that required careful operational thinking and strong business communication. I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, supporting uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO**. I also tuned **PostgreSQL**, surfaced the data in **React** dashboards, and partnered with business stakeholders to refine **product requirements** and **high level software design** decisions. On the operations side, I orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions. Together, these projects map closely to your focus on production standards, **observability**, **alerting**, **runbooks**, and **recovery paths**.

NextEra Energy's mission to help create a more sustainable world, together with its focus on **excellence** and **doing the right thing**, aligns with how I approach engineering. I would value the opportunity to contribute to a team that turns business objectives into dependable software and collaborates closely with product, security, and platform partners to support that mission. Thank you for your time and consideration; I would welcome the chance to discuss how my experience can support NextEra Analytics' work in planning, siting, forecasting, and optimizing energy projects.

Sincerely,
Osaid Khan
