EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, Rust, Html/Css
Backend & Frameworks: FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Databases: PostgreSQL, Redis, MongoDB
AWS Services: API Gateway, CloudWatch, Lambda, Step Functions, RDS, S3, EC2, CloudFormation, CloudFront
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built a Python, LangGraph, LangChain, and FastAPI multi-agent CRM platform serving 10,000+ users by routing requests across 40+ specialized sub-agents with secure access control and production RESTful and event-driven APIs - Built test automation and regression suites across backend APIs, frontend components, and agent workflows by replaying OpenTelemetry traces in GitHub Actions CI/CD to validate integration tests, end-to-end test scenarios, and automated testing frameworks before production deployment - Built a React Flow and TypeScript workflow UI for agent monitoring and workflow visualization, using Temporal for durable execution and Redis progress tracking for long-running jobs - Created a FastMCP server exposing 160+ backend actions to AI agents, adding schema validation, logging, tracing, and performance monitoring for secure tooling, debugging, and multi-tenant observability dashboards - Built LlamaIndex-powered RAG agents with OpenAI embeddings and Pgvector to answer product questions and generate ready-to-run REST API examples for internal development	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Springboot with PostgreSQL and Redis, exposing RESTful upload, download, and delete APIs across Google Cloud Storage, S3, and MinIO via expiring signed URLs - Optimized SQL workloads in PostgreSQL with window functions, materialized views, and indexes, then surfaced the data through React visualizations for business stakeholders and faster analysis - Orchestrated long-running, event-driven jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
- Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries, timeout handling, and execution tracing - Added structured run logs and failure analysis outputs to support agent evaluation, regression debugging, and long-horizon workflow reliability
