EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

AWS Services: CloudFront, EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, API Gateway

Languages: Java, JavaScript/TypeScript, Python, Rust, Html/Css

Backend & Frameworks: React, FastMCP, LangGraph, LangChain, FastAPI, Spring Boot, LangSmith, Langfuse

Others: CI/CD, Docker, Kubernetes, OpenAI Agents SDK, Google ADK, LlamaIndex, Claude Code

Databases: PostgreSQL, MongoDB, Redis

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Engineered a **FastMCP**-based **MCP** server — the **agent experience (AX)** layer implementing **tool-use protocols (MCP, function calling)** — exposing **160+** **tool-callable actions** to first- and third-party **AI agents** over a multi-tenant .NET backend with **OpenTelemetry** instrumentation and tenant-aware JWT access control
- Architected a **multi-agent** autonomous planning platform with **LLM integration** using **LangGraph**, **LangChain**, and **FastAPI** that decomposes customer goals and routes 10,000+ requests across **40+** **specialized sub-agents** — with lazy-loaded tool context, prompt-injection defenses, and JWT-propagated tenant-aware access control
- Built an **agentic console** experience using **React**, **TypeScript**, and React Flow enabling users to design, execute, and observe **agent swarms** visually — backed by **Temporal** for durable, resumable execution and **Redis** for real-time progress tracking across long-running distributed workflows
- Built **LlamaIndex**-powered **RAG** agents using **OpenAI** embeddings and **pgvector** that answer **natural-language** product questions and surface answers grounded in live technical documentation, generating ready-to-run **REST API** examples on demand
- Built **GitHub Actions CI/CD** pipelines for **AI-agent** deployments with **OpenTelemetry** trace-based eval suites that replay production conversations — scoring latency, **tool-call** accuracy, and safety before each deploy to gate releases across **distributed** environments

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Orchestrated long-running **distributed** jobs with **AWS Step Functions** and **Lambda**, implementing fault-tolerant retry logic and end-to-end **CloudWatch** observability across **100K+** weekly executions
- Designed a cloud-agnostic **Storage Service** in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** handling multi-tiered file operations across **AWS S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs — a **distributed**, multi-threaded service built for reliability and scale
- Optimized **PostgreSQL** with window functions, materialized views, and composite indexes to cut query latency, surfacing real-time metrics through interactive **React** observability dashboards for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed** coding-agent orchestrator that decomposes large requests into dependency-aware task DAGs and executes them across multi-machine **AI agents** with autonomous retry, timeout handling, and failure recovery
