Dear Hiring Team,

I am writing to apply for the **Software Engineer** role at **Epsilon**. I bring more than three years of experience building production backend systems, **distributed** AI workflows, and **cloud** services in **Python**, **Java**, **FastAPI**, **Spring Boot**, **PostgreSQL**, **Redis**, **AWS**, **Docker**, and **Kubernetes**.

In my current role at Sperse, I built a **multi-agent** CRM platform in **Python**, **LangGraph**, **LangChain**, and **FastAPI** that serves 10,000+ users through 40+ specialized sub-agents. That work required gathering requirements, reviewing designs in **agile** cycles, and shipping AI/ML workflows with tenant-aware access control, observability, and release gates. I also created a **FastMCP** server exposing 160+ backend actions and OpenTelemetry trace-driven evals in GitHub Actions **CI/CD**, which gave me experience supporting platform behavior end-to-end and catching regressions before deploy. That combination maps closely to Epsilon's need to enable decision scientists, support data-intensive workflows, and contribute to **application development** best practices.

At Qualitest, I designed a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** that handled file operations across **AWS S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs. I also optimized **PostgreSQL** with window functions, materialized views, and indexes, and orchestrated long-running jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts and improve error recovery across 100K+ weekly executions. That experience prepared me to troubleshoot performance issues, support **cloud migration** work, and own problems **end-to-end** in production environments.

Epsilon's mission to deliver **1 View, 1 Vision, 1 Voice** and its emphasis on **collaboration**, **growth**, and **innovation** are compelling to me. I value environments where teams **work together to win together**, respect all voices, and move quickly with accountability. I would welcome the opportunity to bring my experience in **distributed systems**, **cloud platforms**, and production support to a team building data and technology products at scale.

Sincerely, Osaid Khan

Sincerely,
Osaid Khan
