EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, Rust, Html/Css

Databases: PostgreSQL, Redis, MongoDB

AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Built a **Python / FastAPI** multi-agent CRM backend that routes requests across 40+ specialized sub-agents for 10,000+ users, combining tenant-aware access control, secure **APIs**, and **backend development** with production-service monitoring to keep workflows reliable under load
- Designed a **large-scale distributed systems** orchestration layer with **Temporal** and **Redis** to run durable, resumable agent swarms, surface live execution state, and improve engineering productivity through reusable workflow primitives
- Built a production **MCP** server with **FastMCP** exposing 160+ backend actions, adding **debugging and monitoring for production services** plus secure API access for multi-tenant CRM workflows while **developing and integrating APIs** for internal automation
- Wired GitHub Actions **CI/CD deployment processes** with OpenTelemetry trace-based evals to flag latency, accuracy, and safety issues before production, **collaborating across teams** with Engineering, Product, and Operations and validating **Docker** and **Kubernetes** rollouts

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Designed the technology stack for a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, applying **object-oriented design**, **APIs**, and **architecture** patterns to handle file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs while keeping the service **scalable and resilient**
- Reduced **SQL** query latency and improved scalability by optimizing **PostgreSQL** with window functions, materialized views, and indexes, using **data structures and algorithms design** plus **complexity analysis** to keep stakeholder-facing views fast and dependable
- Orchestrated long-running jobs with **AWS Step Functions**, reducing **AWS Lambda** timeouts and improving error recovery across **100K+** weekly executions; strengthened **debugging and monitoring for production services** while resolving **production issues** in product and system reliability and supporting a more resilient **Software Development Lifecycle**

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
- Modeled the system as a reliable control plane for **large-scale distributed systems** experimentation, keeping task execution deterministic enough to debug, rerun, and extend as new agent capabilities were added
