Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Backend Software Engineer II** position with **Kensho**. I bring over three years of professional experience in developing SaaS applications, distributed systems, and highly performant APIs, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across multiple engineering roles, I have built and delivered production-grade backend systems that directly reflect **the technical depth and architectural foresight this position demands**. As a Software Engineer at Sperse, I am currently developing a **SaaS application** interaction layer that translates natural-language intents into **reliable, performant API calls** across 1,000+ endpoints. This requires architecting **highly scalable distributed systems** using LangChain and LangGraph to manage concurrent orchestration while maintaining **loosely-coupled system** behavior. To ensure long-term stability, I have implemented a robust **observability layer** and used **instrumentation** to test assumptions through **prototyping**, resulting in a 60% reduction in latency. Prior to Sperse, as a Software Engineer at Qualitest, I designed a **highly scalable** storage service for a SaaS platform using **Python, PostgreSQL, and Redis**, and developed **reliable backend workflows** using **AWS Step Functions** and **Kafka** to manage long-running jobs. These experiences have instilled in me a focus on **scalable and robust technology** and the ability to turn abstract requirements into concrete technical plans.

My academic research and project work have further developed my expertise in **algorithmic efficiency** and technical communication — skills that align perfectly with Kensho's values of **intellectual curiosity and collaboration**. As an AI Researcher at the Pace Artificial Intelligence Lab, I developed **SaaS-ready** models with a focus on space and time **complexity analysis** on an HPC cluster. Beyond implementation, I lead technical workshops and promote **knowledge sharing** within the engineering community, mirroring the **open and honest communication** that Kensho values. Whether I am engineering a **highly performant** PTY orchestrator for **distributed environments** or collaborating with machine learning and infrastructure teams to develop **API specifications**, I approach every challenge with an **action bias** and a commitment to engineering best practices.

I have always been passionate about **unlocking the power of data through advanced AI** and envision myself contributing my talent to the furthering of **Kensho's mission to make S&P Global's data more insightful and actionable**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
