EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, Rust, Html/Css

AWS Services: EC2, S3, Lambda, Step Functions, CloudWatch, CloudFormation, RDS, CloudFront, API Gateway

Others: CI/CD, Docker, Kubernetes, Git, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Databases: PostgreSQL, Redis, MongoDB

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Developed **common libraries** and reusable **modular** components as a **Python**-based **MCP** server using **FastMCP**, exposing 160+ programmatically callable backend actions across multi-tenant environments — with **OpenTelemetry** instrumentation and Pydantic validation enforcing **reliability** and tenant isolation at every interface boundary
- Built **CI/CD** automation pipelines using **GitHub Actions** to **simplify and accelerate** the software deployment cycle, integrating **OpenTelemetry** trace-based evaluation suites that gate every production release by validating latency, accuracy, and safety thresholds
- Engineered a **distributed** multi-agent orchestration platform in **Python**, **LangGraph**, and **FastAPI** that routes requests across 40+ specialized sub-agents with **cross-functional** tenant-aware **JWT** access control, achieving **scalability** to 10,000+ users
- Automated daily PR triage across 25–30 PRs/week by building an agentic code review pipeline integrating **OpenAI Codex** with a custom Bitbucket **MCP** server, eliminating hours of manual reviewer load and accelerating release cycles
- Delivered a visual agentic workflow platform in **React** and **TypeScript** backed by **Temporal** for durable and resumable execution with **Redis**-powered live progress tracking, developed iteratively across **Agile/Scrum** sprint cycles

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Orchestrated long-running, fault-tolerant jobs with **AWS Step Functions** and **Lambda** to eliminate timeout failures and improve error recovery across **100K+** weekly **distributed** executions — increasing system **reliability** and operational uptime
- Designed a cloud-agnostic **Storage Service** in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** handling file operations across **AWS S3**, **Google Cloud Storage**, and **MinIO** via expiring signed URLs, applying hands-on **storage** and **networking** systems engineering across heterogeneous cloud backends
- Optimized **PostgreSQL** with window functions, materialized views, and composite indexes to improve **scalability** and reduce query latency across high-traffic workflows, exposing results via interactive **React** visualizations for business stakeholders

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a **distributed** coding-agent orchestrator that decomposes large requests into dependency-aware **task DAGs** and executes them across multi-machine agents with retries and timeout handling, ensuring **reliability** and fault-tolerant execution at **scale**
- Designed **modular**, **standardized** agent task interfaces that cleanly separate orchestration logic from agent implementation, enabling horizontal **scalability** and reuse across heterogeneous multi-machine environments
