Dear Hiring Team,

I am writing to express my interest in the **Software Engineer I** role at **Uber**. I bring three years of experience building backend systems, production services, and distributed automation, along with a Master of Science in Computer Science from Pace University.

At Sperse, I built a **Python / FastAPI** multi-agent CRM backend that routes requests across 40+ specialized sub-agents for 10,000+ users, and I designed a **large-scale distributed systems** orchestration layer with **Temporal** and **Redis** to keep workflows durable, resumable, and observable. To keep those systems production-ready, I built a production **MCP** server with **FastMCP** exposing 160+ backend actions, added **debugging and monitoring for production services**, and wired GitHub Actions **CI/CD deployment processes** with OpenTelemetry trace-based evals and **Docker** and **Kubernetes** rollouts. That work maps directly to the backend development, APIs, reliability, and engineering productivity needs of this role.

At Qualitest, I designed the technology stack for a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, using **object-oriented design**, **APIs**, and **architecture** patterns to handle file uploads, downloads, and deletions across **Google Cloud Storage**, **S3**, and **MinIO** via expiring signed URLs. I also reduced **SQL** query latency by optimizing **PostgreSQL** with window functions, materialized views, and indexes, and orchestrated long-running jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts and improve error recovery across **100K+** weekly executions. That experience strengthened my ability to design **scalable and resilient systems**, **collaborate across teams**, and solve **production issues in product and system reliability**.

Uber's mission to reimagine the way the world moves for the better resonates with me because it combines real-world impact with **grit, agility and adaptability**. I would welcome the chance to contribute to the marketplace systems, APIs, and production services that keep Uber moving, and to do so in a culture grounded in flexibility and collaboration. Thank you for your time and consideration; I look forward to discussing how my background aligns with **this team and its mission**.

Sincerely,
Osaid Khan
