EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Databases: PostgreSQL, Redis, MongoDB

AWS Services: RDS, EC2, CloudWatch, S3, Lambda, Step Functions, CloudFormation, CloudFront, API Gateway

Languages: Java, Python, JavaScript/TypeScript, Rust, Html/Css

Backend & Frameworks: Spring Boot, FastAPI, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse

Others: Docker, Kubernetes, CI/CD, Git, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer

Sperse

Phoenix, AZ

Feb 2026 - Present

- Operated a **highly-available Python** and **FastAPI** CRM platform serving 10,000+ users, routing requests across 40+ specialized sub-agents with tenant-aware access control, secure tool execution, and production reliability controls.
- Developed **self-service** and self-managing orchestration tools with **React Flow**, **TypeScript**, and durable workflow execution so teams could create, run, and manage agentic swarms with resumable execution and operational visibility.
- Built an agentic code review pipeline integrating **OpenAI Codex** with a custom Bitbucket MCP server, automating daily PR triage across 25-30 PRs/week and reducing manual reviewer load by several hours.
- Created a **FastMCP** server exposing 160+ backend actions as safe, validated tool calls, enabling full-stack workflow automation with built-in monitoring for **production issues** and triage.
- Built GitHub Actions **CI/CD** pipelines for AI-agent deployments, running OpenTelemetry trace-based evals to capture latency, accuracy, and safety data before production releases.

Software Engineer

Qualitest

Noida, India

Feb 2021 - Dec 2023

- Designed **database infrastructure** for a cloud-agnostic Storage Service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis**, operating file uploads, downloads, and deletions across **distributed data storage systems** (**S3**, Google Cloud Storage, and MinIO).
- Optimized **database performance** for a **PostgreSQL** relational database with window functions, materialized views, and indexes, then exposed **actionable insight** through interactive **React** dashboards for engineering and business stakeholders.
- Orchestrated long-running server workloads on **AWS** with **Step Functions**, **Lambda**, and error-recovery paths, reducing timeouts and improving reliability across **100K+** weekly executions.
- Supported **cloud infrastructure** operations with **RDS**, **CloudWatch**, and repeatable deployment patterns, debugging database-backed services for scalability, reliability, and production performance.

PROJECTS

Dark Factory - orchestrator for PI agent | *Elixir, TypeScript*

github.com/ozzyozbourne/dark-factory

- Built a distributed coding-agent orchestrator that breaks large requests into dependency-aware task DAGs and executes them across multi-machine agents with retries, timeout handling, and failure recovery.
- Added infrastructure-style coordination patterns for asynchronous background job processing, making long-running agent work observable, resumable, and easier to triage when production-like issues occur.
