Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the Software Engineer opportunity with Cisco. I bring over three years of backend engineering experience and a strong academic foundation as a Master of Science in Computer Science graduate from Pace University.

In my recent role at Sperse, I developed and delivered an MCP AI interaction layer that translated natural-language intents into safe, validated tool calls across 1000+ platform endpoints, with backend microservices and APIs running on distributed systems. I also implemented an observability stack with Langfuse and LangSmith across Linux services, improving root-cause analysis for TCP/IP, DNS, and DHCP paths while helping reduce end-to-end latency by 60% and LLM API cost by 50%. At Qualitest, I designed a cloud-agnostic storage service with Python, PostgreSQL, and Redis across Google Cloud Storage, S3, and MinIO, and contributed to IAM backend microservices with AWS Step Functions workflows that supported 30+ applications and prevented Lambda timeouts. This aligns closely with Cisco's focus on scalable backend systems, cloud platforms, analytics platforms, and reliable engineering for business-critical initiatives.

I am especially motivated by Cisco's purpose: combining technology, people, and broader networks to address society's greatest challenges and to power an inclusive future for all. I connect strongly with Cisco's emphasis on responsible innovation, including security, privacy, trust, and ethics, and with community resilience through meaningful technology impact. I would bring the same engineering discipline and collaborative communication I applied while building AI/ML data pipelines and distributed computing workflows in graduate research with StyleGAN, Stable Diffusion, PyTorch, and vLLM on an HPC cluster.

I would welcome the opportunity to contribute to Cisco's Software Engineer teams building AI-driven platforms and data infrastructure. Thank you for your consideration. I can be reached at +1 (945) 304-5781 or [khanosaid726@gmail.com](mailto:khanosaid726@gmail.com).

Sincerely,  
Osaid Khan
