Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Developer** with **Intercontinental Exchange**. I bring over three years of professional experience in full-stack web applications, RAG and AI agents, along with a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Through my experience across two engineering roles, I have built and delivered production-grade backend systems that directly reflect **the technical depth this position demands**. As a Software Engineer at Sperse, I developed and maintained **Java**-based microservices using **Spring Boot**, implementing **RESTful APIs** for financial data processing and market data feeds, collaborating with cross-functional teams in **Agile** environments and participating in **code reviews** to maintain code quality. I wrote comprehensive **unit** and **integration tests** using **JUnit** and **Mockito**, ensuring software reliability and reducing regression risk across the codebase. I utilized **Maven** for dependency management and build automation, and optimized database queries and **JPA** entity mappings to improve application performance. Prior to Sperse, as a Software Engineer at Qualitest, I developed **Java** backend services using **Spring Boot** and **RESTful APIs** for an Identity & Access Management platform, supporting thousands of users across 30+ applications, and implemented **JPA** with **PostgreSQL** for data persistence. I created and maintained **unit** and **integration tests** using **JUnit** and **Mockito**, ensuring 80%+ test coverage and reducing production defects, and utilized **Maven** for build automation and dependency management, integrating with **CI/CD** pipelines for reliable deployment. Together, these roles have prepared me to **contribute meaningfully to the team's core engineering responsibilities** and drive impact within an agile engineering team.

My academic research experience has given me a rigorous foundation in model development, GPU-accelerated computing, and technical communication — skills that translate directly into **the engineering discipline and collaborative culture this team values**. As an AI Researcher at the Pace Artificial Intelligence Lab, I conducted applied research on StyleGAN and Stable Diffusion to generate industry-standard fashion designs, leveraging CUDA, PyTorch, and LoRA on Pace University's HPC cluster for model training and fine-tuning. I was responsible for managing the full model development lifecycle — from data preparation and training runs to inference optimization using vLLM and deployment via Hugging Face — ensuring both performance and secure, efficient model serving. Beyond building the systems myself, I led workshops on GPU programming with CUDA and Mojo, and on building AI Agents with LangChain and LangGraph, for an audience of 50+ students. Designing and delivering those sessions required me to break down complex technical concepts clearly and accessibly — directly mirroring **the mentorship and knowledge-sharing responsibilities central to this role**. This experience has shaped me into an engineer who builds with rigor and communicates with clarity, both of which I would bring to **this team and its mission**.

I have always been passionate about **building reliable financial technology solutions** and envision myself contributing my talent to the furthering of **ensuring fair and orderly markets through innovative technology**. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
