Dear Hiring Team,

It is with great interest that I submit my candidacy for the **Backend Engineer** role with **Standard Metrics**. I bring more than three years of experience building production backend systems and **web applications** in **Python**, **FastAPI**, **PostgreSQL**, **Redis**, **AWS**, **Docker**, and **Kubernetes**, along with a Master of Science in Computer Science from Pace University.

At Sperse, I built production **web applications** in **Python** and **FastAPI** serving 10,000+ users by routing requests across 40+ specialized sub-agents with tenant-aware access control, lazy-loaded tool context, and traceable backend execution. I also built an agentic code review pipeline that automated 25-30 PRs/week through **continuous integration** and **peer reviews**, plus **GitHub Actions CI/CD** pipelines that shipped containerized services through **Docker** and **Kubernetes** while OpenTelemetry evals caught latency, accuracy, and safety regressions before production. Earlier at Qualitest, I designed a cloud-agnostic storage service in **Java** and **Spring Boot** with **PostgreSQL** and **Redis** across **Google Cloud Storage**, **S3**, and **MinIO**, then optimized query latency and orchestrated 100K+ weekly jobs with **AWS Step Functions** to reduce **AWS Lambda** timeouts. That combination maps directly to the ownership, iteration, documentation, and bug-fix discipline needed to support core product outcomes end to end.

Standard Metrics' mission to accelerate innovation in the private markets is compelling to me because the product sits at the intersection of durable infrastructure and better decision-making. I especially value your bias toward action in **Take the Next Step** and your commitment to lasting systems in **Build Good Bones** and **Work in the Open**. I would welcome the chance to contribute meaningfully to the team's core engineering responsibilities and help strengthen the automated reporting and benchmarking workflows that investors and portfolio companies rely on every day.

I would love to discuss my fit for this role with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, I look forward to connecting!

Sincerely,
Osaid Khan
