EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css
Backend & Frameworks: FastAPI, Spring Boot, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
AWS Services: EC2, RDS, S3, Lambda, CloudWatch, Step Functions, CloudFormation, CloudFront, API Gateway
Databases: PostgreSQL, Redis, MongoDB
Others: Git, CI/CD, Docker, Kubernetes, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built production web applications in Python and FastAPI, serving 10,000+ users by routing requests across 40+ specialized sub-agents with tenant-aware access control, lazy-loaded tool context, and traceable backend execution - Built a React Flow and TypeScript workflow platform for creating, running, and managing agentic swarms, using Temporal for durable execution, resumable background jobs, and long-running outcome tracking - Built an agentic code review pipeline integrating OpenAI Codex with a custom Bitbucket MCP server, automating 25-30 PRs/week and reducing manual reviewer load through continuous integration and peer reviews - Created a FastMCP server exposing 160+ backend actions so AI agents could automate CRM workflows securely across customers, with built-in monitoring and access controls - Built GitHub Actions CI/CD pipelines for AI-agent deployments, shipping containerized services through Docker and Kubernetes while running OpenTelemetry trace-based evals to catch latency, accuracy, and safety regressions before production	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic storage service in Java and Spring Boot with PostgreSQL and Redis that handled file uploads, downloads, and deletions across Google Cloud Storage, S3, and MinIO via expiring signed URLs - Reduced query latency and improved scalability by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposed the data through interactive React visualizations for business stakeholders - Orchestrated long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
