Dear Hiring Team,

I am excited to apply for the Software Developer role at Mortgage Connect. I bring hands-on experience building and shipping production systems, including **web-based tools/applications** that convert natural-language requests into validated actions across **1000+ platform endpoints**, and I am motivated by the chance to support your mortgage operations with scalable, reliable software.

In my recent Software Engineer roles, I have translated requirements into **robust well-designed technical solution** delivery across the full **software development life cycle**. At Sperse, I built **event-driven programing** flows with **LangGraph** and **LangChain** in **multi-tiered client/server architectures**, then executed **unit testing** and defect debugging with **LangSmith** and **Langfuse** before release. At Qualitest, I developed Python/PostgreSQL/Redis backend services, improved support resolution time by **20%** with RAG tooling, and partnered with application analysts, test engineers, and technical writers on integrations spanning **.NET**, **C#**, **ASP.NET**, **XML**, and **SQL Server** interfaces.

My AI Researcher experience at Pace AI Lab strengthened the engineering rigor and communication this role demands: I delivered **full lifecycle project experience** from model design to deployment, applied **Design Patterns** to modular pipelines, and led technical workshops for **50+** students while working independently and collaboratively with minimal supervision. That mix of implementation depth and cross-team communication is how I would contribute to Mortgage Connect's core engineering responsibilities.

I am especially aligned with Mortgage Connect's focus on innovation and operational excellence, and with your commitment to a strong consumer experience while reducing compliance risk. I would welcome the opportunity to contribute to that mission through disciplined engineering execution and customer-focused product delivery. Thank you for your consideration; I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com.

Sincerely,
Osaid Khan
