EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, Rust, Html/Css
AWS Services: S3, Lambda, API Gateway, RDS, EC2, CloudWatch, Step Functions, CloudFormation, CloudFront
Databases: PostgreSQL, Redis, MongoDB
Backend & Frameworks: FastAPI, Spring Boot, React, LangGraph, LangChain, FastMCP, LangSmith, Langfuse
Others: Docker, Kubernetes, Git, CI/CD, Google ADK, OpenAI Agents SDK, LlamaIndex, Claude Code

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - Present</i>
- Built a multi-agent CRM platform in Python, LangGraph, LangChain, and FastAPI for a distributed environment, routing 10,000+ users across 40+ specialized sub-agents with tenant-aware access control and observability, while enabling data engineering handoffs for decision scientists - Partnered with product and decision scientists to gather requirements, review designs in agile sprint cycles, and shape AI/ML workflows that moved from prototype to production without blocking delivery and reinforced application development best practices - Created an MCP server with FastMCP exposing 160+ backend actions, giving agents secure platform support across multiple customers with built-in monitoring and auditability - Built OpenTelemetry trace-driven evals in GitHub Actions CI/CD to replay production conversations, score latency, accuracy, and safety, and catch regressions before deploy - Added live progress tracking for long-running Temporal workflows using Redis, helping users monitor resumable executions from the dashboard	
Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Designed a cloud-agnostic Storage Service in Java and Spring Boot with PostgreSQL and Redis that handled file uploads, downloads, and deletions across AWS S3, Google Cloud Storage, and MinIO via expiring signed URLs, supporting cloud migration across cloud platforms - Reduced query latency and improved scalability by optimizing PostgreSQL with window functions, materialized views, and indexes, then exposed the data via interactive React visualizations for business stakeholders - Orchestrated long-running jobs with AWS Step Functions, reducing AWS Lambda timeouts and improving error recovery across 100K+ weekly executions in a production pipeline	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed coding-agent orchestrator that breaks large coding requests into dependency-aware task DAGs and executes them across multi-machine AI agents with retries and timeout handling
