EDUCATION

Pace University

Master of Science (MS) in Computer Science (GPA - 4.0/4.0)

New York City, NY

Jan 2024 - Dec 2025

Dr. A.P.J. Abdul Kalam Technical University

Bachelor of Technology (B.Tech) in Computer Science

Noida, India

Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages & APIs: *Java*, Python, TypeScript, JavaScript, SQL, *RESTful APIs*, FastAPI, Spring Boot

Systems & Data: *Microservices*, *Distributed Systems*, PostgreSQL, MongoDB, Redis, Pgvector, event-driven architectures

Cloud & DevOps: *AWS*, Google Cloud Storage, Docker, Kubernetes, GitHub Actions, CI/CD pipelines, DevOps practices

Engineering: Backend systems, developer tools, testing, debugging, code reviews, documentation, security, performance tuning

PROFESSIONAL EXPERIENCE

Software Engineer

Phoenix, AZ

Sperse

Feb 2026 - Present

- Architected and implemented **scalable backend systems and APIs** with Python, FastAPI, LangGraph, and PostgreSQL, routing requests across 40+ specialized services with secure access control for 10,000+ users
- Built high-performance developer tools and customer-facing workflows with **TypeScript**, React Flow, Temporal, and **Redis**, delivering durable, resumable execution and real-time status for mission-critical applications
- Improved system **reliability and security** by exposing 160+ validated backend actions through FastMCP, adding tenant-aware authorization and monitoring across multi-customer automation workflows
- Participated in **code reviews, testing, and documentation** by automating 25–30 PR reviews/week and building GitHub Actions **CI/CD pipelines** with trace-based evaluations that caught latency, accuracy, and safety regressions before production

Software Engineer

Noida, India

Qualitest

Feb 2021 - Dec 2023

- Engineered a scalable Storage Service in **Java** and Spring Boot using **RESTful APIs**, PostgreSQL, Redis, and AWS S3, securely handling uploads, downloads, and deletions across S3, Google Cloud Storage, and MinIO via expiring signed URLs
- Optimized system performance by tuning relational database workloads with PostgreSQL window functions, materialized views, and indexes, then delivered React visualizations to product stakeholders for end-to-end operational insight
- Debugged and hardened **event-driven architectures** with AWS Step Functions and Lambda, reducing timeouts and improving error recovery across 100K+ weekly executions in collaboration with engineers and business teams

PROJECTS

Dark Factory - orchestrator for PI agent | *TypeScript, Distributed Systems* github.com/ozzyozbourne/dark-factory

- Built a multi-machine **distributed systems** orchestrator that decomposes complex requests into dependency-aware task DAGs and schedules services with retries and timeout handling for reliable execution
- Applied strong **debugging and problem-solving skills** to design, test, and optimize fault-tolerant coordination across backend microservices, improving scalability for long-running workloads
