EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0) Jan 2024 - Dec 2025</i>	New York City, NY
University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India Jul 2016 - Sep 2020

TECHNICAL SKILLS

Languages: *Java*, *Python*, JavaScript/TypeScript, Rust, SQL, HTML/CSS
Systems & Backend: *Linux*, *FastAPI*, Spring Boot, REST APIs, distributed systems, microservices, TCP/IP, load balancing
Data & Infrastructure: *PostgreSQL*, *MySQL*, Redis, AWS (EC2, RDS, S3, Lambda, CloudWatch, Step Functions), Docker, Kubernetes
Production Engineering: CI/CD, GitHub Actions, observability, OpenTelemetry, capacity planning, performance optimization, debugging, AI-assisted development

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ Feb 2026 - Present
- Owned and productionized a backend using Python and FastAPI, serving 10,000+ users by routing requests across 40+ specialized agents with tenant-aware access control and end-to-end operational ownership. - Architected scalable, durable workflow services with Temporal, Redis, and TypeScript/React Flow; debugged live long-running executions through progress telemetry, retries, and resumable state management. - Wrote and reviewed production code for an MCP service exposing 160+ validated backend actions; used AI tools (OpenAI Codex) to automate 25–30 PR reviews weekly while preserving quality, accuracy, and safety checks. - Built GitHub Actions CI/CD pipelines and OpenTelemetry trace-based evaluations to analyze latency, tool-call accuracy, and production reliability before deployment.	
Software Engineer Qualitest	Noida, India Feb 2021 - Dec 2023
- Designed a storage service using Java, Spring Boot, PostgreSQL, and Redis for reliable uploads, downloads, and deletions across S3, Google Cloud Storage, and MinIO via expiring signed URLs. - Analyzed and optimized PostgreSQL performance using window functions, materialized views, and indexes, reducing query latency and improving scalable access for business-facing React visualizations. - Orchestrated fault-tolerant background services with AWS Step Functions and Lambda, reducing timeout failures and improving error recovery across 100K+ weekly executions.	

PROJECTS

Dark Factory - orchestrator for PI agent <i>Elixir, TypeScript</i>	github.com/ozzyozbourne/dark-factory
Built a distributed systems coding-agent orchestrator that decomposes complex requests into dependency-aware DAGs and coordinates multi-machine workers with retries, timeout handling, and efficient resource use.
