Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Java Developer** role with **Undisclosed Company**. I bring over three years of professional software engineering experience and a strong academic foundation as a Master of Science in Computer Science graduate from Pace University, NY.

Across my engineering roles, I have delivered production backend systems aligned with your need for deep expertise in **Java 8, Spring Boot, Spring Framework, RESTful Web Services / APIs**, and **Spring Batch**. At Qualitest, I developed enterprise backend applications and microservices for an Identity & Access Management platform supporting thousands of users across 30+ applications, implemented Spring Batch pipelines for long-running import workflows, and built persistence layers using **JPA / Hibernate** with optimized **SQL** on **PostgreSQL** relational databases. I also partnered closely with QA and DevOps in Agile/Scrum delivery, writing JUnit/Mockito unit tests, contributing to integration testing, and supporting production deployments. At Sperse, I designed backend services spanning 1000+ endpoints and improved production performance by reducing latency by 60% and API cost by 50%, strengthening my ability to troubleshoot bottlenecks and maintain reliable services under scale.

I am especially motivated by teams that value engineering rigor, secure delivery, and strong cross-functional communication. In addition to backend product delivery, I have led technical workshops for 50+ students on CUDA and agent frameworks, which strengthened my ability to communicate complex systems clearly in collaborative design and review settings. I would bring that same discipline to requirement analysis, code reviews, and day-to-day collaboration with engineering, QA, and operations partners.

I am excited about contributing to Undisclosed Company's focus on building secure, scalable, and reliable enterprise applications, and on close collaboration across product, QA, and DevOps stakeholders. I would welcome the opportunity to contribute to this mission and help deliver robust backend and batch processing solutions. I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, and I look forward to connecting.

Sincerely,
Osaid Khan
