Dear Hiring Team,

I am excited to apply for the AVP-Systems Engineering role at Moody's Shared Services, Inc. I bring over three years of systems-focused engineering experience across cloud infrastructure, automation, and production operations, plus an M.S. in Computer Science from Pace University.

In my current role at Sperse, I lead **systems automation/scripting** initiatives that translate natural-language requests into safe execution paths across **1000+ platform endpoints**. I implemented a **monitoring standard** with **Langfuse**, **LangSmith**, and **CloudWatch** using **metrics, logs, and system alarms** to strengthen **system integration and monitoring**, speed troubleshooting, and improve **preventative maintenance**. I also optimized runtime concurrency and routing to improve stability during **high severity incidents**, cutting latency by **60%** and API cost by **50%**. This directly aligns with Moody's focus on automation, observability, and reliable incident response.

At Qualitest, I built cloud services on **Python**, **PostgreSQL**, and **Redis** across **Google Cloud Storage**, **S3**, and **MinIO**, applying **enterprise deployment strategies** for server **OS**, **Virtualization**, and **secure system configurations** in **AWS/Azure cloud** environments. I also developed **AWS Step Functions** and **Lambda** workflows using **Tuning and troubleshooting OS (CPU, Memory and I/O, Cloud deployments)** playbooks, and supported **enterprise Server Operating Systems** across **Unix**, **RHEL 6/7/8** and **CentOS** and **Red Hat** estates with **Ansible as orchestration tool**, **python/bash as scripting language**, **Patch management**, and **Vulnerability Management**. These outcomes map closely to your requirements for operating-system lifecycle ownership, cross-functional infrastructure support, and security-aligned execution.

Moody's mission to help organizations navigate risk with clarity and confidence strongly resonates with me. I am especially aligned with your values to **Lead with curiosity** and **Uphold trust through integrity**, and I would welcome the opportunity to contribute to that mission through scalable systems engineering and disciplined operations. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your consideration.

Sincerely,
Osaid Khan
