Dear Hiring Team,

I am excited to apply for the **Software Engineer, IS&T Early Career Opportunities** role at **Apple**. I bring more than three years of professional software engineering experience and an MS in Computer Science, with hands-on work building server-side services in Java and Python, customer-facing web applications in JavaScript and TypeScript, and cloud systems on AWS and GCP. This combination directly supports IS&T's work operating consequential enterprise and customer technology at global complexity and immense scale.

At Sperse, I built Python and FastAPI services for a multi-agent CRM platform serving more than 10,000 users and developed a JavaScript/TypeScript and React workflow application backed by Temporal and Redis for durable, real-time execution. I also engineered a FastMCP service exposing over 160 secure backend actions and led CI/CD and trace-based evaluation work that detected latency, accuracy, and safety regressions before production. These accomplishments reflect the end-to-end ownership, Computer Science Fundamentals, and quantitative problem solving needed to build reliable solutions in IS&T's rapidly growing and dynamic setting.

Previously at Qualitest, I designed a Java and Spring Boot Storage Service spanning AWS S3, Google Cloud Storage, and MinIO through expiring signed URLs. I also improved PostgreSQL performance with window functions, materialized views, and indexes, and orchestrated 100K+ weekly executions using AWS Step Functions and Lambda. That experience prepared me to contribute across Software Engineer (Backend), Full Stack Software Engineer, and Site Reliability Engineer needs while collaborating clearly with technical and business stakeholders.

Apple's focus on innovation, collaboration, and serving others resonates with how I approach engineering. I am especially drawn to Apple's commitment to privacy and inclusion: building technology that keeps data safe while creating a culture where everyone belongs. I would welcome the opportunity to bring disciplined engineering, leadership through ownership, and a commitment to reliable systems to Apple's IS&T organization. I can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration.

Sincerely,
Osaid Khan
