EDUCATION

Pace University <i>Master of Science (MS) in Computer Science (GPA - 4.0/4.0)</i>	New York City, NY <i>Jan 2024 - Dec 2025</i>
Dr. A.P.J. Abdul Kalam Technical University <i>Bachelor of Technology (B.Tech) in Computer Science</i>	Noida, India <i>Jul 2016 - Sep 2020</i>

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java, Rust
Databases: PostgreSQL, Redis, MongoDB
Frameworks: FastAPI, FastMCP, React, Sprint Boot, LangGraph, LangChain, LangSmith, PyTorch
Others: Node.js, CI/CD, Kafka, Google Cloud, Git
AWS Services: Step Functions, Lambda, RDS, API Gateway, CloudWatch, EC2, S3, CloudFormation, CloudFront
AI: Codex, Claude code, Pi coding-agent

PROFESSIONAL EXPERIENCE

Software Engineer Sperse	Phoenix, AZ <i>Feb 2026 - present</i>
- Developed an MCP layer delivering Just-in-Time solutions across 1000+ platform endpoints, applying Interruption-Resilient Design (atomic logic, readable modules, handoff-ready docs) so paused work transferred cleanly without losing technical integrity - Built Rapid Application Engineering accelerators for Low-Code platforms (including OutSystems delivery patterns) with API-aware templates, SDK patterns, and code-generation workflows, translating ambiguous requests into prototypes with a Product Owner mindset and faster Stakeholder Consultation cycles	

AI Researcher Pace Artificial Intelligence Lab	New York City, NY <i>Sep 2025 - Dec 2025</i>
- Conducted research on StyleGAN and Stable Diffusion using CUDA, PyTorch, and LORA (Low-rank Adaptation) on Pace University's HPC cluster, building reproducible pipelines that ran as reliable background processes in Linux server environments - Used vLLM for inference and Hugging Face deployment while authoring Python mini-apps for dataset validation and data transformations (loops, arrays, conditional branching) to keep experiments auditable and production-oriented	

Software Engineer Qualitest	Noida, India <i>Feb 2021 - Dec 2023</i>
- Built an internal support chatbot with LangChain and RAG over a PostgreSQL vector store, and designed downstream SQL schemas/views with Downstream Transparency and relational database management rigor so analytics teams could model insights in Power BI; reduced ticket resolution time by 20% - Developed backend workflows with AWS Step Functions to orchestrate long-running imports, prevent AWS Lambda timeouts, and enforce asynchronous messaging reliability aligned to AMQP/RabbitMQ queue patterns while maintaining Cross-Platform Interoperability for background processes and scheduled tasks in Windows/Linux server environments	

PROJECTS

Dark Factory - Orchestrator for AI coding CLIs <i>Crossterm, Ratatui, Y-crdt</i> github.com/ozzyozbourne/dark-factory	
- Enables full CLI IO ownership via PTY with command validation, interruption-safe checkpoints, and audit logs - an applied model of Interruption-Resilient Design for high-change workflows - Uses Y-crdt coordination and event-driven loops to dispatch prioritized work between agents, mirroring Operational Triage, Iterative Architecture, and Continuous Optimization with asynchronous messaging for responsive delivery - Streams real-time session updates (no polling) to improve downstream visibility, reinforcing Downstream Transparency for debugging, analytics, and performance tuning
