Dear Hiring Team,

It is with great pleasure that I submit my candidacy for the **Platform Engineer** role with **NeuBird AI**. I bring over three years of professional experience building production-grade backend and platform systems, along with a Master of Science in Computer Science from Pace University.

At Sperse, I built and maintained **internal platforms** for **engineering productivity** by delivering safe tool orchestration across **1000+ platform endpoints**. I designed developer-facing **CLI tools** and **internal APIs** that standardized **infrastructure as code** with **Terraform**, **Helm**, and **Kustomize**, and I implemented a **Kubernetes platform** runtime for **Docker** workloads with clear deployment guardrails. I also built **observability tooling** with Langfuse and LangSmith and improved **CI/CD** feedback loops, reducing latency by **60%** and API cost by **50%**.

Earlier at Qualitest, I designed cloud-agnostic API services spanning AWS- and Azure-oriented integration patterns and contributed to IAM workflows balancing delivery speed with **security** and **compliance**. I also built long-running Step Functions workflows to improve operational reliability. In parallel, my AI research work at Pace AI Lab strengthened my habit of building reproducible systems and communicating technical depth clearly through workshops for 50+ learners.

NeuBird AI's mission to move teams from reactive troubleshooting to proactive production operations strongly resonates with how I approach platform work. I am especially aligned with your emphasis on **customer focus** and **ownership**, and I would welcome the opportunity to help your engineering teams ship faster with safer defaults, better self-service paths, and clearer production insight.

I would love to discuss my interest in this position with your team and can be reached at +1 (945) 304-5781 or khanosaid726@gmail.com. Thank you for your time and consideration, and I look forward to connecting.

Sincerely,
Osaid Khan
